3-7 October 2005

**Further information will only
be sent to those returning the reply card,
a fax or e-mail message**

9th International FZK/TNO
Conference on
Soil-Water Systems

in cooperation with brgm

9th International FZK/TNO Conference on Soil-Water Systems

in cooperation with brgm

The 9th ConSoil Conference will continue the successful programme of the previous ConSoil series. Besides the traditional ConSoil focus on contamination of soil and groundwater, ConSoil 2005 will also deal with soil/water interactions related to natural processes, contamination and other perturbations. With this multi-focus, ConSoil 2005 will support the EU Policy aiming at the sound and integrated management of the soil-water systems in Europe. ConSoil will thus stay the platform to exchange news and knowledge between:

- scientists
- policy makers
- consultants and service providers
- administrators
- site owners and river basin managers
- remediation companies and contractors
- banking and insurance companies.

The conference is organized by Forschungszentrum Karlsruhe (FZK) and The Netherlands Organization for Applied Scientific Research (TNO) in cooperation with the Bureau de Recherches Géologiques et Minières (brgm). It is supported by governments and agencies from Germany, The Netherlands, France and other countries.

Registration fee: approx. EUR 750

The conference language will be English.

Provisional Conference Programme

ConSoil 2005 will offer:

- Sessions (3½ days)
 - Opening and Closing sessions
 - 25 Lecture sessions (about 100 oral presentations)
 - 15 Special sessions on specific issues
 - 3 Poster sessions (about 400 posters)
 - Up to 6 Country sessions (presenting national/ regional developments and issues)
 - ConSoil case session
- Commercial exhibition
- Technical Tours to various projects and sites in the vicinity of Bordeaux (1½ days)
- Social programme
- Conference evening with dinner and entertainment
- Music event (on Sunday before the official start of ConSoil)

Overall conference themes:

- Processes in the soil/water system
- Impacts of human interventions
- Managing the impacts of human interventions, regulations
- Prevention and remediation methods and technologies
- Socio-economic aspects
- Case studies
