

R&D across the NDA for waste and decommissioning

Darrell Morris – Research Manager

Why do we do R&D?

- **Established via Energy Act 2004 by Government to:**
 - Safely clean up the UK civil public sector nuclear legacy with due regard to the environment and security and socio-economic issues.
 - Ensure that current commercial operations are run safely and efficiently on behalf of UK taxpayer.

Dealing with the past
Protecting the future

Where do we do it?

- **Primary function is to decommission and clean up 19 sites in UK**
 - reactors
 - fuel reprocessing plants
 - fuel fabrication plants
 - redundant enrichment plant
 - nuclear laboratory complexes
- **Develop national solutions for dealing with Low Level Waste**
- **Implement the geological disposal facility for higher activity wastes**

How NDA delivers R&D

- **NDA R&D role:**
 - Promote and, where necessary, fund generic research relevant to nuclear decommissioning and clean-up
- **Current R&D strategy:**
 - SLCs carry out R&D in conjunction with the supply chain, with an NDA led strategic R&D programme being carried out by the supply chain. NDA provide overall leadership in order to deliver the NDA's mission

Direct NDA-funded Research

- **Key objectives:**
 - Inform strategy / policy
 - Innovation – Generic needs / risks / opportunities
 - Maintain / develop key technical skills
 - Promote link to SLC

Direct Research Portfolio (DRP)

Lot 1 – University Interactions

Lot 2 – Waste Processing

Lot 3 – Material Characterisation

Lot 4 – Actinide & Strategic Materials

Framework Contractors
Competed via OJEU

Concepts

Multiple
< £50k

Technology Demonstration Project

Single
< £1million

Supply Chain
Competed via Open Calls

DRP: Lot 1 – University Interactions

- **Framework Contractors**
 - NNL and Serco
- **Direct funding of Universities**
 - Capability: Professorships / Lectureships / PDRAs
 - PhDs / EngDocs / CASE awards
- **Technical support**
 - Providing industrial perspective
 - DIAMOND – www.diamondconsortium.org
 - RCNDE – www.rcnde.ac.uk
- **Access to experimental facilities**
 - Active experiments within NNL Central Laboratory

DRP: Lot 2 – Waste Processing

- **Framework Contractors**
 - Hyder Consulting Consortium, NNL, UKAEA Consortium
- **Full cycle**
 - Retrieval / Processing / Wasteform / Packaging / Storage / Disposal
- **Examples from FY08-09**
 - Modular/mobile effluent retrieval and transfer plants – NNL
 - Opportunities to segregate short-lived and long-lived ILW – Hyder
 - Silicone polymers as encapsulants - UKAEA

DRP: Lot 3 – Material Characterisation

- **Framework Contractors**
 - NNL, Serco, UKAEA Consortium
- **Two main areas of investigation**
 - Contaminated land & Waste characterisation
- **Examples from FY08-09**
 - Good practice in data management & storage for land quality – Serco
 - Monitor on industrial scale – NNL
- **Examples from FY08-09**
 - Graphite characterisation – UKAEA
 - Rapid characterisation of contaminated material without a reliable gamma fingerprint - Serco

DRP: Lot 4 – Actinide & Strategic Materials

- **Framework Contractors**
 - NNL and UKAEA Consortium
- **Three main areas of investigation**
 - Plutonium
 - Uranium
 - Spent-fuel: Magnox, Oxide, Exotic
- **Examples from FY08-09**
 - Radiolysis and Surface Reactions during the Storage of Plutonium Oxide - UKAEA with ITU
 - Immobilisation of Plutonium in a Ceramic Wasteform – NNL

Concepts

- **Small scale innovation projects**
 - Overall cost of <£50k
 - Duration of less than 1 year
 - Potential deployment typically medium to long term
- **Open call with supply chain**
 - Nuclear Waste Research Forum used to technically evaluate proposals
- **Examples**
 - Demonstration of NVisage™ for thick shielding geometries – REACT
 - Computer modelling of organic forms – Fortis Mechanical Design Ltd

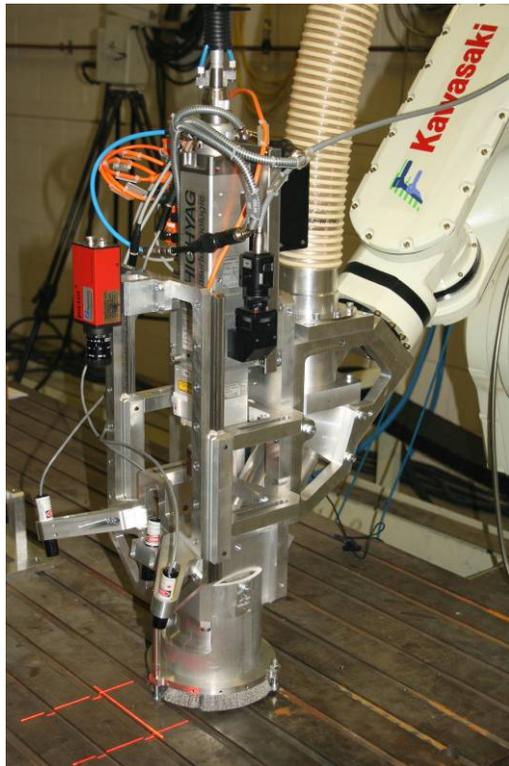

Technology Demonstration Project

- **Laser Cutting and scabbling – TWI**
- **Why**
 - Decommissioning area on appropriate timescale
 - Knowledge transfer
- **Benefits**
 - Uses recent development in fibre lasers
 - Remote laser unit and laser on end of fibre optic cable
 - Cutting – no resistive force
 - Insertion point ~5 years

Technology Demonstration Project

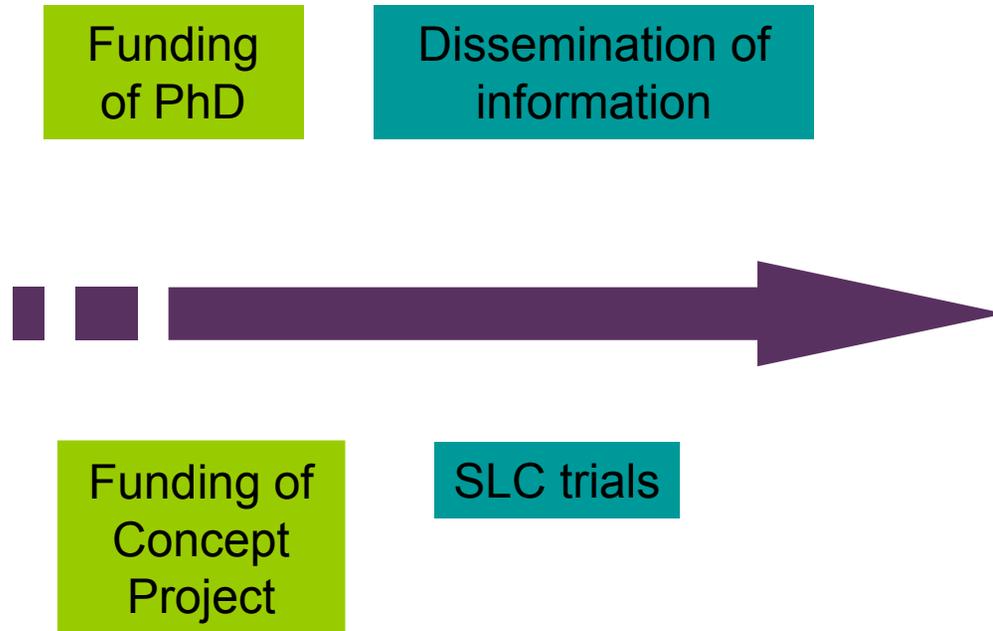

Laser Scabbling Head

First single side cutting trials

R&D Timeline

Ice-Pigging

Dissemination of information

- R&D area on NDA website launched (www.nda.gov.uk/research)
 - Applying appropriate and innovative technology is critical to our mission of accelerating and delivery clean-up programmes
 - Sharing innovative thinking across estate and supply chain
 - Commitment to openness and transparency

- Contact details

research@nda.gov.uk

The screenshot shows the NDA website's 'Research and Development' section. At the top, there is a navigation menu with links for Home, About Us, News & Events, Our Strategy, Our Sites, Stakeholders & Community, Suppliers, Contact Us, and Document Library. A search bar is located in the top right corner. The main content area is titled 'Research and Development' and includes an overview paragraph stating that applying appropriate and innovative technology is critical to the NDA's mission. Below this, there is a section for 'Background information' with tabs for Overview, Funded Research, Key Documents, and Key Contact. A 'Research and Development Updates' section displays a list of recent news items, including 'Europe discusses geological disposal' (09 November 2009) and 'Europe Supports Geological Disposal' (02 November 2009). On the right side, there is a 'See also' section with a 'Latest Research News' section featuring articles such as 'Cillit Bang used in clean-up at Dounreay' (25 August 2009) and 'Funding for study into Solway Energy Gateway' (06 July 2009). The NDA logo is visible in the top left corner of the page.

Summary

Applying appropriate and innovative technology is critical to our mission of accelerating and delivering clean-up programmes
